

FORTH REPLACEMENT CROSSING CONTACT AND EDUCATION CENTRE

We provided pre-contract quantity surveying services for the new build Contact and Education Centre at the Forth Replacement Crossing including external works. The Contact and Education Centre is a purpose-built facility serving as a focal point for community engagement and education during the building of the Queensferry Crossing as well as being a permanent working environment for Traffic Scotland's National Control Centre. Visitors can enjoy detailed bridge models, audio visual materials, exhibition panels and spectacular views of the Forth Road Bridge, and on-going construction of the Queensferry Crossing. The centre is home to the Forth Replacement Crossing Project Exhibition, where members of the public can explore the education and exhibition facilities, listen to presentations by the Queensferry Crossing project team, and ask questions of representatives from Transport Scotland and the Forth Crossing Bridge Constructors.
